“ itec is a valued partner to BlackBox and happy to put that on record ”

Amy Harris - Business Support Manager, BlackBox

itec's **Design** service offers operational and technical consultancy excellence.

Our highly skilled and experienced consultants work with organisations to understand business objectives, workshop technical requirements and architect the right strategy and solutions to support the customers' end vision.

Our collaborative vendor agnostic consultative approach promotes a deep understanding of the existing customer environment and infrastructure. From there our consultants can develop appropriate best of breed architectures which may integrate into and complement existing infrastructures to protect the customer's original technology investment while delivering the quality solution originally required.

Design implements measurable high value processes and systems which enable your customer to grow their business now and in the future.

itec is addressing requirements such as:

- IT strategy and business alignment
- Streamlining legacy strategies through process and systems management
- Access and security policy implementation and enforcement
- Staff realignment and technology training
- Protection of infrastructure investment
- Analysis and optimization of business systems and information flows
- Full solution architecture
- Site and Environment Audits

itec's **Design** consultants will objectively analyse a customer's requirements, create a strategy and phased implementation plan for delivering a solution to meet the objective and can engage other key itec service departments in order to manage the implementation of the solution design. itec are always happy to engage with customer partners and 3rd parties in order to fully deliver upon a customer objective.
